Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group received a standard diet, while the experimental group received a diet supplemented with 0.5% of the active ingredient. The subjects were then subjected to a 12-week period of physical training. The results were then compared between the two groups.

1. The first step is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.
